EXAMINER

MANNING, JOHN

ART UNIT PAPER NUMBER

2623

DATE MAILED: 03/23/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>		<b>Applicant(s)</b>	
	09/879,353		TOGURI, YASUHIRO	
	<b>Examiner</b>		<b>Art Unit</b>	
	John Manning		2614	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1,2 and 5-25 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,2 and 5-25 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments have been fully considered and are persuasive.

Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Sezan et al. (US Pat Application Publication No 2005/0188328).

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-2, 5-8, 10, 12, 14 and 16-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itakura (U.S. Patent No. 6,351,745) in view of Sezan et al. (US Pat Application Publication No 2005/0188328).

Itakura et al. teach a system used in a communication network that allows clients to access information Internet over a broadband connection as well as receive messages such as advertisements. User preferences are stored in a user database and advertisements are sent to users based on their preferences. A billing system is also taught to charge the advertiser based on the advertisements displayed to the user.

With respect to claims 1, 6, 8 and 16, Itakura teaches the claimed information processing apparatus. The claimed "first registration means for registering general

Art Unit: 2614

additional information regarding said contents data" is met by Itakura's means to store data and identifying information. In column 8, lines 1-11 Itakura teaches storing data which represents the location of the data requested. This information may also include, for example, a home page address IURQ of a store on the world wide web. Because applicant has claimed a plurality of types of "general additional information" in the alternative, the burden on the examiner is only to satisfy a single element. Therefore, the claimed "contents ID" is met by storing in association an ID, such as the above noted URL. This is explicitly taught in column 8, lines 7-11. In this manner, Itakura meets the claimed first registration of "general information" regarding said contents data. The claimed "second registration of additional individual information..." is met by Itakura in the registering of client preferences in item S416 of figure 17. User information such as sex, marriage status, occupation, etc. are stored in the message user database 34 of figure 6. Itakura also teaches that a transmittal condition database 36 can record additional individual information regarding goods that the user has already shown interest in, claimed "on the basis of at least said contents data," to ensure that suitable advertisements are sent according to user preferences in column 10, lines 48-58. The "individual information" is used to select the content data; therefore, there is a direct correlation between the two. As taught in column 10, lines 21-30, this database stores message URL's that identify each message and the corresponding transmission conditions. By using the user information to find proper messages, the message URL's are also "registered" for individual users based on preferences as "additional individual information," as claimed. The claimed storage means for storing

said first and second registration information are thus met by the message user database 34 and the transmittal condition database 36. The stored general additional information and additional individual information is extracted using a characteristics reader used to retrieve characteristics from the databases as taught in column 27, lines 48-49. If a user is inactive, messages including general and individual additional information are not sent. Rather, only when "a delivery request for contents data" is received will the message distribution apparatus search and extract required information (col. 15: 13-42). The individual additional information "is extracted on the basis of user information comprising at least one of user status and user usage classification" by extracting based on user status, active or idle, and user characteristics, in order to accurately target active users. Furthermore, the claimed generation means for generating individual data to be transmitted based on the general and individual additional information is met by the message distribution apparatus 39 of figure 1. Itakura teaches receiving a request for contents, followed by the reading of user preferences from said message user database 34 and transmittal condition database 36. The terminal 10 is the second information processing apparatus and the information provider 20 is the first information processing apparatus. Based on user preferences, messages as well as a URL relating to additional information are generated as taught in column 10, lines 31-58. The transmission means for transmitting said contents data, general additional information, and additional individual information is met by Itakura in column 11, lines 60-67 and column 12, lines 1-8. Itakura teaches an Internet connection with known communication method and message distribution apparatus 39 for

Art Unit: 2614

distributing said individual data as messages to a terminal 10 of figure 1. With respect to displaying said contents data, general additional information, and individual additional information simultaneously, Itakura fails to disclose "segment individual additional information which is associated with one of a plurality of segments of the contents data and scene individual additional information associated with one of a plurality of scenes in contents data". Sezan teaches "segment individual additional information which is associated with one of a plurality of segments of the contents data and scene individual additional information associated with one of a plurality of scenes in contents data" so as to efficiently determine content of potential interest to the user (See Paragraphs 0042, 0188 and 0190-0192; Figures 13 and 20). It clearly would have been obvious for one skilled in the art at the time to modify Itakura with teaches "segment individual additional information which is associated with one of a plurality of segments of the contents data and scene individual additional information associated with one of a plurality of scenes in contents data" for the stated advantage. The combined teaching fails to disclose that said contents data, said general additional information and said individual additional information are simultaneously displayed on a display screen where contents data is delivered together with extracted information. The Examiner takes Official Notice that it was well known in the art at the time of the invention for said contents data, said general additional information and said individual additional information to be simultaneously displayed on a display screen where contents data is delivered together with extracted information. It would have been obvious for one skilled in the art at the time of the invention to modify the combined teaching with said contents

data, said general additional information and said individual additional information are simultaneously displayed on a display screen where contents data is delivered together with extracted information in order to provide the user with information regarding the watched program, thereby enhancing viewing enjoyment.

With respect to claim 2, the claimed means for recording charging information on the basis of individual data generated is met by Itakura in the message access log 37 as seen in figure 12. Itakura teaches recording information regarding the access of said individual information data in column 1, lines 9-21.

With respect to claim 5, the claimed updating charging information by updating "charges to at least an end user for use of said contents data and/or individual metadata on the basis of said generated metadata" is taught in col. 10:59+ through col. 11: 8 by relieving a charge from a user based on a connection log. The connection log indicates what messages are recognized by a user and bills the message provider in order to relieve the user of their connection fee.

With respect to claim 7, the claimed recording medium wherein a program for controlling an information processing apparatus to deliver data over a network is taught by Itakura in the message manager 24. Itakura teaches message viewer software 76 of figure 3 to be installed on the terminal device in a recording medium in column 8, lines 43-67 and column 9, lines 1-3. Itakura further teaches that the recording medium can be a variety of devices such as RAM, DVD's, floppy disks, CD-ROM, tap media, semiconductor memory etc in column 25, lines 5-24. The software in the terminal device is used to communicate with message manager 24 of Figure 1 over the Internet.

The message manager is taught to send and receive messages with the terminal as well as access databases. In this manner the message manager meets the claimed program because it controls the processing of all limitations. All other limitation are met by that addressed above for claim 1.

With respect to claims: 10, 12, and 14 are met by all of the limitations that are reflected in claim 1 as addressed above.

With respect to claim 17, Itakura teaches delivering messages and additional information to users based on their viewing history, as well as charging message providers in response to the delivery of the messages. As noted above, Itakura teaches receiving a request for a message, followed by the reading of user preferences from said message user database 34 and transmittal condition database 36. Based on user preferences, characteristics including status, and usage history as seen in Figures 7, 8, and 9, claimed user status and classification, the messages suitable for individual viewers are generated. This general purpose additional information is displayed in the message viewer window 62 and as well ms a URL link through home page button 64. Although the specific term "metadata" is not used, the generation of individual metadata from general additional information and extracted additional information is taught. Examiner notes that applicant defines metadata as additional information that describes audio and video data on page 1, lines 18-21. This information is taken as commonly defined in the industry to include information such as name, size, data type, length, location, ownership, associations, and a number of other factors that describe contents data. All other limitation are met by that addressed above for claim 1.

With respect to claims 18-25, are by the limitations addressed for claim 1 (by virtue of the alternative language).

4. Claims 9, 11, 13, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itakura et al. (6,351,745) and Sezan et al., and further in view of Kitsukawa et al. (6,282,713).

With respect to claims 9, 11, 13, and 15 neither Itakura nor Sezan explicitly teach splitting registration per object appearing within said contents data Examiner notes that the use of "hot spots" is well known in the art, and that these systems would read on many of the limitations of claim 1. Hot spots are used to allow the viewer to obtain additional information regarding items in a display. A display is split per object based on items, claimed additional information, with additional individual information consisting of a URL link that provides additional information about the item appearing in within the display. To these means, Kitstzkawa et al. (6,282,713) teach an electronic advertising system utilizing hot spots to link users to additional information regarding displayed products. As seen in Figure 5, items containing additional information are separated per object and URL- information, claimed individual additional information, is registered for each item. As seen in Figure 4, item 410, a user may select an item, claimed "request," and as taught in column 7, lines 34-40 the 111 advertisement or web link may be displayed simultaneously with the regularly playing programming using well known picture in picture techniques. It would have been obvious for one skilled in the art at the time of the invention to further modify the techniques taught by Itakura and Sezan by splitting additional information per object as taught by Kitsukawa in order to provide

additional information relating to multiple items displayed in a program that the user may have interest in.

***Conclusion***

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Manning whose telephone number is 571-272-7352. The examiner can normally be reached on M-F: 9:00 - 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W. Miller can be reached on 571-272-7353. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
